HIT Strategy & Guidance Services For Health Care Organizations

For health care organizations today, the question is not whether to invest in these technologies. It is a matter of *deciding which technology(ies) will best meet their current critical market and business needs*, and what options will fit within their resources.

At RTC, we help our clients *think through such technology alternatives*, and at the same time, carefully *consider how to prepare* their organization for the depth of business process change that these new technologies frequently require.

We provide extensive guidance to our clients on *how to structure their implementation projects* to assure a successful outcome and an *achievement of their business objectives* and ROI.

We help our clients *plan for and implement practical project testing processes and technologies* that can assure that the application meets health care's reliability standards.

Sometimes our clients ask us to help them *take their project or program management capabilities to the next level*.

We *provide project management and technical staffing* to fill critical gaps during the implementation of complex software packages.

We provide *clear assessments of projects in trouble* and a prescription for *restoring the health of the project*.

If our clients require it, we *can lead the effort to get the project back on track*.

We help our clients make sure that these *technologies are brought smoothly on line*.

We help our clients fully prepare to continue to *deliver quality patient care in the event of a system outage*.

Please take a moment to review our *service pages*, and feel free to *contact us* for more information on how ReliaTechConsulting services can help make your health IT initiative a success.

Let RTC help you chart your HIT course. We keep you in charge of the journey.
